Appl. No. 10/089,351

Atty. Docket No. 8278

Amdt. Dated October 5, 2004

Reply to Final Office Action of July 21, 2004

Customer No. 27752

AMENDMENTS TO THE SPECIFICATION

Please replace the paragraph beginning on page 8, line 21, with the following amended

paragraph:

A representative embodiment of a semi-enclosed applicator of the present invention in the

form of a hand article is the disposable mitt 10 shown in Figure 1. Figure 1 is a plan view of the mitt

10 of the present invention in its flat-out state illustrating the body portion 20, cuff portion 21, central

portion 22, distal portion 23, and reservoir 30. In general terms, the mitt 10 has an internal cavity that

is accessible through [[an]] at least one opening in the cuff portion and that extends inwardly toward

the distal end that is closed.

Please replace the paragraph beginning on page 8, line 27, with the following amended

paragraph:

Figure 2 shows the construction details of the mitt 10 more specifically. The mitt 10 has a

front outer surface 31, a front inner surface 32, a back outer surface 33, and a back inner surface 34.

The front and back inner surfaces define a hollow interior 29 into which a hand may be inserted

through an opening in the cuff portion 21. The mitt 10 includes a front panel (or first side) 24, which

defines the front outer surface 31, and a back panel (or second side) 26, which defines the back outer

surface 33. The front and back panels are connected along their periphery to form a seam 36. The

seam 36 can be straight or may be tapered. For example, the seam 36 in may be inwardly tapered in

the area of the cuff region to allow the applicator to stay on the hand of the user better. In addition

to, or in place of, tapered seams, elastic material may be added in the cuff region to keep the

applicator on the hand of the user.
